

JAGRATI MALI

Indore, Madhya Pradesh | [PHONE] | jagrati7678@gmail.com

LinkedIn: [LINKEDIN URL] | GitHub: github.com/Jagrati07 | Portfolio: jagrati07.github.io

EDUCATION

B.Tech, Computer Science and Engineering (AI & ML)

Rajiv Gandhi Proudyogiki Vishwavidyalaya (RGPV), Indore

Currently in 3rd semester | CGPA: [X.XX] | Expected graduation: [YEAR]

BS in Data Science and Applications, IIT Madras (online)

Foundation level completed [] Grade: ADD OR DELETE]

PROJECTS

Medical Cost Regression Analysis [(in progress): delete this tag if finished]

- Built a multiple linear regression model in Python (Pandas, NumPy) on a medical insurance dataset of [N rows], reaching [R2 / RMSE].
- Checked residual diagnostics and multicollinearity (VIF) with Python, and [what you found, e.g. removed N correlated features].
- Compared Ridge and LASSO regression against the baseline, and tested model errors across groups for fairness, finding [result].

Credit Default Scorecard [(in progress): delete this tag if finished]

- Trained logistic regression, decision tree and Random Forest models in Python on a loan default dataset of [N rows], reaching [AUC / F1].
- Set a cost-sensitive cutoff using [cost assumption], which changed [metric] from [X] to [Y].
- Plotted gain and lift charts with Matplotlib, showing the top [N%] of scores captured [X%] of defaulters.

Campus Health Survey [(in progress): delete this tag if finished]

- Designed a survey and collected [N] responses from [population, e.g. students in your campus/year].
- Analysed results in Python with t-tests, Chi-square tests and ANOVA at a [0.05] significance level.
- Found [key finding, e.g. significant difference in X between groups, p = value].

Portfolio Website

- Built a personal portfolio site with HTML and CSS, with [N] sections: [e.g. About, Projects, Contact].
- Deployed it on GitHub Pages using Git and GitHub, live at jagrati07.github.io.
- Showcases [N] projects with links to their GitHub repositories.

SKILLS

Languages and libraries: Python, NumPy, Pandas, Matplotlib

Tools: Git, GitHub, VS Code

Web: HTML, CSS

Statistics and ML (coursework): probability and distributions, Central Limit Theorem, hypothesis testing (Z, t, Chi-square, ANOVA), linear and multiple regression with diagnostics, multicollinearity (VIF), Ridge and LASSO, gradient descent from scratch, logistic regression, classification metrics (confusion matrix, precision, recall, F1, ROC/AUC), gain and lift charts, decision trees, KNN with GridSearch, Random Forest
